## **MAINTAIN**

## Antifreeze, Brake Fluids and Service Products

## Around the clock reliability – at any temperature

The FUCHS MAINTAIN range of workshop and service products is a comprehensive portfolio of coolant additives, brake fluids and fuel additives.

These offer your vehicle optimum protection at all times – particularly in winter.

Our MAINTAIN products match with nearly every vehicle type and offer the best possible protection together with the latest technology.

# Antifreeze. For reliable protection at any time of the year

Antifreeze must meet many requirements, as an average of around 150 liters of coolant are pumped through the cooling circuit of a typical passenger vehicle every minute. One third of the heat generated during combustion is dissipated into the atmosphere via the coolant. The coolant itself passes over more than 100 different materials and must be compatible with all of these.

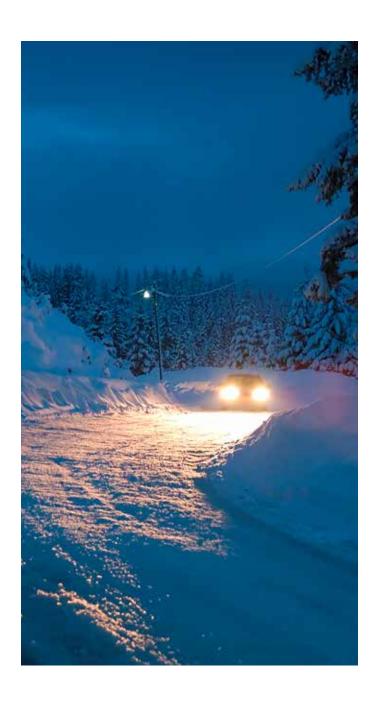

Only premium products like the MAINTAIN FRICOFIN range offer certified safety and are capable of fulfilling all tasks and requirements expected of modern antifreeze, such as:

- Antifreeze, i.e. reliable prevention of liquids freezing, even at extremely low temperatures.
- Protection from soiling/deposits to keep the entire cooling circuit working properly in the long term.
- Protection from overheating, for example if sufficient heat dissipation is no longer guaranteed due to soiling deposits.
- Protection from aging and oxidation, so that the protective effect of the coolant remains intact throughout the entire duration of the respective service interval.

#### and, particularly important:

 Corrosion protection to reliably eliminate the risk of damage to any metallic materials in the cooling circuit, such as cast iron, cast aluminium, steel and brass. Without proper coolant, the cooling system provides ideal conditions for corrosion thanks to its high temperatures and large volume of water. Deep rust spots/pitting can occur in the metal, potentially causing the coolant pump or the entire cooling system to fail. This can ultimately lead to extremely costly engine damage. The MAINTAIN FRICOFIN range of coolants reliably prevents corrosion. The key components here are so-called corrosion inhibitors. They bond with the metals in the cooling system and form a wafer thin, yet extremely strong protective layer on their surface.

## MAINTAIN FRICOFIN LL

Premium Performance Coolant Additive based on monoethylene glycol. Free from nitrite, amine, phosphate and silicates. Product dyeing: orange

## Find the right antifreeze for your vehicle with the online Oil Chooser from FUCHS

#### It could hardly be easier

Simply navigate to www.fuchs.com/de and then click on the "Oil Chooser" menu item. Choose your vehicle type (for example passenger car) and select the appropriate make and model. A window then appears with an overview of the optimum lubricants to your vehicle. All you have to do now is to click on the appropriate application (in this case: "cooling system") and the required product for your vehicle will be shown.

## Brake fluids. Safe and reliable in any situation

Brake fluids are special hydraulic fluids that are used to transfer the pedal force applied during braking to the brake cylinder.

These important liquids must meet strict requirements:

- A high boiling point offers safety in extreme conditions such as the kinds of very high temperatures that can occur when driving down steep hills. The boiling point describes the characteristic of the sealed new brake fluid. Brake fluids have boiling points of 230°C (DOT 4) or 260°C (DOT 5.1).
- Lowest possible drop in boiling point due to water absorption (high wet-boiling point). The wet-boiling point describes the characteristic at the end of the liquid's life-cycle. Wet-boiling point as per the DOT specifications: DOT 4: 170°C and DOT 5.1: 180°C.
- Optimum corrosion protection for the system.
- Extensive compatibility with all materials used in the braking system, such as plastics, rubber or metals.

The FUCHS MAINTAIN DOT 4 and DOT 5.1 brake fluids are high performance fluids that fulfill or exceed all requirements.

Always have your brake fluid checked every 2 years and replaced as necessary.

After all, safety is the top priority.

## **MAINTAIN DOT 5.1**

Ultra High Performance Brake Fluid for hydraulic brake systems and clutch actuation in passenger cars, trucks and motorcycles.

#### **Specifications**

FMVSS NR. 116 DOT 5.1 ISO 4925 CLASS 3/4/5.1 SAE J 1703/J 1704

#### **Approvals**

# Fuel additive. Gets any diesel engine ready for winter

### MAINTAIN WINTERFIT

It is important to plan ahead to prevent problems during start-up and operation caused by paraffin separation.

Super high performance diesel fuel and fuel oil additive for protection against paraffin separation caused by extremely cold conditions.

#### **Benefits:**

- Burns off completely without any residue
- Ignitability is not compromised
- No reduction in viscosity, thereby preventing pump wear
- Can be mixed with and is fully compatible with all diesel fuels (except for biodiesel), as well as EL fuel oils

21

## Fuel additive. Improves all diesel fuels

### MAINTAIN DIESEL EFFECT

It is important to plan ahead to prevent problems during start-up and operation caused by increased biogenic additives to the diesel fuel or low-quality fuels (for example outside the EU).

High performance gasoline additive concentrate for cleaning the fuel and intake system. Recommended for continuous use.

#### **Benefits:**

- Can be used all year round
- Maintains engine output
- Reduces fuel consumption
- Reduces exhaust emissions
- Improves diesel fuels (as per DIN EN 590)
- Improves biodiesel fuels (as per DIN EN 14214)
- Improves diesel fuels with increased substitute material concentrations (types B7 to B100)
- Offers corrosion protection
- Offers protection from aging
- Offers protection from soiling/deposits
- Removes existing deposits in the tank, fuel lines, injectors, combustion chamber and valves
- Improves demulsibility
- Can render the use of biocides superfluous

## Gasoline additive. Improves any gasoline fuel

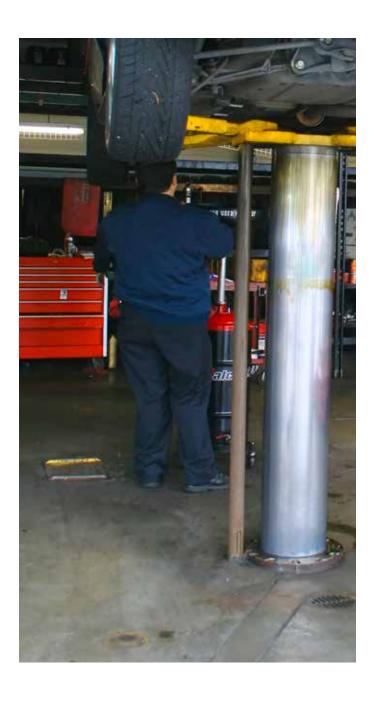

## MAINTAIN GASOLINE PLUS

Fuels with high sulfur content (for example outside the EU), a high proportion of bioethanol (more than 10%) or of generally low quality often have a negative impact on start-up behavior, combustion and operational reliability. Many fuels are also sold without any additives. To prevent issues such as soiling deposits, any vehicle owner can take action on their own before problems occur.

High performance gasoline additive concentrate for cleaning the fuel and intake system. Recommended for continuous use.

#### **Benefits:**

- Recommended for multi-point injection engines
- Recommended for direct-injection engines
- Recommended for carburettor and two-stroke engines
- Excellent removal of soiling/deposits in the combustion chamber, valves, intake system, injectors, fuel lines and fuel tank
- Excellent "keep clean" and "clean up" performance
- Very good corrosion protection
- Very good water separation
- Metal-free and ashless technology
- Burns off without any residue
- Gentle on catalytic converters
- For all standard commercial gasoline fuels
- For gasoline fuels up to E20
- Maintains engine output
- Saves fuel
- Particularly recommended for low-grade fuels
- Particularly recommended for continuous use

## Oil binder. Offers reliable protection from environmental damage

### MAINTAIN ABSORPEX

MAINTAIN ABSORPEX is a granular mineral oil binder with extremely high absorption capacity that is used to combat oil pollution and other chemicals in both the indoor and outdoor arena, for example in the case of oil spills on road surfaces or leaks on solid ground. It offers good skid resistance even when fully saturated and, thanks to its fine grain, penetrates even the smallest cracks and recesses. MAINTAIN ABSORPEX is free of asbestos and similar fibrous materials

Oil Binder Type III R, Chemical Binder

## **Notes**

#### Note

The information contained in this brochure is based on the experience and expertise of FUCHS SCHMIERSTOFFE GMBH in the development and manufacture of lubricants and represents the current state of the art. The performance of our products can be influenced by a series of factors, especially the specific use, the method of application, the operational environment, component pretreatment, possible external contamination, etc. For this reason, it is not possible to make universally valid statements about the function of our products. Our products must not be used in aircraft/spacecraft or parts thereof. This does not apply insofar as the products can be removed again before components are fitted in an aircraft/ spacecraft. The information given in this product information represents general, non-binding guidelines. No warranty expressed or implied is given concerning the properties of the product or its suitability for any given application. We therefore recommend that you consult a FUCHS SCHMIERSTOFFE GMBH application engineer to discuss application conditions and the performance criteria of the products before the products are used. It is the responsibility of the user to test the functional suitability of the products and to use them with the corresponding care. Our products are subject to continuous further development. We therefore retain the right to change our product range, the products, and their manufacturing processes as well as all details in this brochure at any time and without warning, provided that no customer-specific agreements exist that require otherwise.

With publication of this product information leaflet, all previous editions cease to be valid. Any form of reproduction requires express prior written permission from FUCHS SCHMIERSTOFFE GMBH.
